

Premium Multimedia Server

STORAGE

A terabyte high speed SATA drive comes standard on all systems. Store up to 100 movies, 20,000 songs, and thousands of photos.

MEMORY

A gigabyte of memory allows for lightning fast access to system resources and smooth navigation of growing media libraries.

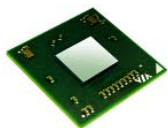

OPTICAL

High speed 18x SATA DVD drives offer rapid and reliable importing of music and movies.

NETWORK

Built-in gigabit Ethernet support speeds data around the home network for nearly instant sharing and streaming of media.

PROCESSOR

New faster and more powerful processor and chipset built to handle the demands of managing a growing media library.

Available in two and four zone configurations, the F.Series is the perfect choice for the majority of home installations. The F.Series features multiple audio outputs from a single unit, allowing family members to listen to different songs in different rooms of the house.

The F.Series can be controlled from the TS.6N or any internet connected computer allowing effortless navigation of your music collection. NetSync technology provides multilocation synchronization. Add an F.Series model to a second home or boat and the music collection is available to enjoy and manage in both locations automatically.

The F.Series synchronizes to iTunes and includes Automatic Dual Encoding to store music in both full fidelity WAV for the best sound at home, and also in MP3 for streaming over the Internet or loading to an iPod or portable music player.

Pair your F.Series with a NAS device and the IMC Intelligent Media Client to unleash DVD movie and streaming video capabilities.

ReQuest
SERIOUS PLAY

- Automatic Dual Encoding for high fidelity and portability
